

The business plan book

The paper part - 5 of principles and papers part - 35 of experiment proof coming to practical use

IKOSOLID Monopole Equipment

The equipment which erases electron in the line and an electric current safely fully and the line blockade equipment from electron. It is a manufacturing beginning business plan book toward domestic and the world.

The decisive science policy from “the nuclear switch safety device” to “the global environment improvement CO2 reduction”.

The equipment which erases an electric current and electron in the line without damaging one LED, too.

The equipment of the blockade of the arrival of electron and the electric current to the line

The progressive leap policy of the global economy

The business plan book

The paper part - 5 of principles and papers part - 35 of experiment proof coming to practical use

IKOSOLID Monopole Equipment

The equipment which erases electron in the line and an electric current safely fully, and the line blockade equipment from electron. It is a manufacturing beginning business plan book toward domestic and the world.

The decisive science policy from “the nuclear switch safety device” to “the global environment improvement CO2 reduction”.

The equipment which erases an electric current and electron in the line without damaging one LED, too.

The equipment of the blockade of the arrival of electron and the electric current to the line

The progressive leap policy of the global economy

The purpose of IKOSOLID Monopole Equipment :

The safety device of the explosive. And, the safe and full arrangement for stopping of the detonator.

The terror prevention and the full blockade equipment for the nuclear power plant, the nuclear plant

The 2nd explosion arrester which is due to the erasure of the electric current and the electron in the line which becomes an explosion factor in case of the vehicle accident

The ones of the case of the accident such as the jet and the propeller-driven aircraft (the passenger plane, the war plane and so on) helicopter, the space rocket, the 2nd explosive accident arrester which is due to the erasure of line remaining electron and the electric current. By train (the linear motor car, the Super express, train and so on) in case of the accident. In the vehicle (the bus, the track, the motorcar and so on) in case of the accident. But, the vehicle needs to make a cost saving therefore.

The full lock, the security equipment of the latching of a safe and important facilities and so on.

The full lock security equipment which is due to the blockade of the exclusion of electron of the line of the latching such as the state important facilities, the military facilities, the safe. The latching lock security equipment such as the building and the safe of the emergency

The decisive science policy of the decrease of CO2 as the global environment, global warming prevention. And the decisive science policy of the energy problems and the loss prevention decisive policy of the electric power energy.

The full eraser of the standby current and the remaining electron of night non- use of the building in the line. The energy measures by the decisive loss power attenuation prevention which is due to the erasure of electron in the line and the electric current with the non- use electric power of the government office facilities, the factory, the building, the school and so on in night and so on. Then, it becomes the decisive policy of electric power reduction's global warming prevention CO2 reduction. The erasure of the remaining electron and the electric current of the non- use line becomes marvelous electric power loss prevention at the gross weight of the Japanese level, the world level.

The decisive science policy of the electric energy loss prevention by the full repartition with use electric power and unused electric power

It is due to the distinction wiring according to the electric power intended-purpose from being general, and the loss prevention policy of the electric energy by the remaining electron and the electric current erasure of the unused line every time

The multiple setting policy which used 2 main features of this equipment (the erase-function of electron and the electric current in the line, and the reaching impossible blockade feature of electron and the electric current to the line)

The nuclear plant blockade equipment and the nuclear weapon sealing-device by the cancellation encryption by the multiple setting

The patent : The registered trademark (IKOSOLID) No. 4801773

The registration of design (The electromagnetic pulse decrease receptacle) No. 1241511 No. 1242570

The invention patent 2004-291056 " The magnetic flux decrease device " The application

The invention patent 2009-206511 " Positron generator which used IKOSOLID adelphus " The application

The manufacturing beginning standard budget : The popularization purpose beginning standard business of production toward domestic, the world.

**Japan: 47 prefectures × \$1,250,000 (50sets × \$25,000)
= \$58,750,000**

**World : 200 countries × \$3,125,000 (125 sets × \$25,000)
= \$625,000,000**

The presentation documents :

The business plan book “IKOSOLID Monopole Equipment”

The experiment proof theory paper of the production unit:

**Study of connecting point with three-dimensions and four-dimensions
by pictorial art part - 35 “IKOSOLID Monopole Equipment”**
