The introduction: What is IKOSOLID ?

**IKOSOLID: The occurrence and the use of the repulsive force
by IKOSOLID**

With IKOSOLID, the repulsive force occurs and we can use it. As for the this book, the principle and a demonstration experiment are being described. Repulsive force is originally paired with the gravitation. However only gravitation is perceived by the we human race and is used by " single laterality at Moebius Strip " which is the maximum feature of the three-dimensional world in the earth. With IKOSOLID, for the first time, the occurrence of the repulsive force and the use became possible. The repulsive force is original " repulsive force element $e +$ with supervelocity of light, another mass (the female, the closed string) ". However, it becomes " repulsive force element $e +$ with speed of light, and low speed of light, another mass (the female, the closed string) " to apply to the three-dimensional world with IKOSOLID and it occurs and it is possible to use. In other words, slowdown is caused by IKOSOLID to velocity of light and low velocity of light from super velocity of light. This principle and a demonstration experiment were described and it attached the papers of the feature and the shape of IKOSOLID to the back of the book.

IKOSOLID : IKOSOLID is a conductor for the semiconductor

IKOSOLID is a conductor for the semiconductor. The semiconductor handles only electron but IKOSOLID is because it handles electron (gravitation element $e -$) and a positron (repulsive force element $e +$) as the conductor. The positron (repulsive force element $e +$) to handle with this book is not so-called antielectron that does a pair production and the pair-annihilation. It is the positron (repulsive element $e +$) which coexists with electron (gravitation element $e -$) in the line and out of the line. **Therefore all each industrial field treating this conductor become world No. 1.**

**IKOSOLID : The shape. It is the transformation body by the
perspective of PYRAMID or the regular-octahedron of
Platon.**

The thing which is interesting about the shape of IKOSOLID, as it is in the photograph of the beginning of the this book, the regular-octahedron of Platon which adjusted the bottom of the pyramid is to be transformed into IKOSOLID with the perspective. Four of regular-octahedron of Platon becomes one IKOSOLID . If it does a pyramid, it becomes one IKOSOLID with eight pyramids.

IKOSOLID : The shape-2. Kleine's bottle body

IKOSOLID is a Kleine's bottle body not a torus body. The structural principle of the torus body is two-dimensional, and there is the structural principle of the Kleine's bottle body in the four dimensions.

IKOSOLID : In mathematics "Pythagorean theorem" "Magic square"

IKOSOLID is topology to use "Pythagorean theorem" and "Magic square" in mathematics. The use in the physics of "the Magic square" is an original thing of IKOSOLID SCIENCE.

IKOSOLID: IKOSOLID has the function that it tears the single laterality while it corresponds to the Moebius strip in these three dimensions.

The three-dimensional world which we live in which is atmosphere in the earth has an important feature, **single laterality at Moebius strip**, to the multiple-ness of the universe. Single laterality of the velocity of light in super velocity of light and the velocity of light. Single laterality of the consciousness in consciousness and the non-consciousness. Single laterality of the gravitation in the repulsive force and the gravitation.

In this way, in the three-dimensional world, only the side can be perceived. IKOSOLID has the function that it tears the single laterality while it corresponds to the Moebius strip in these three dimensions.

IKOSOLID: " Repulsive force " is to equip with the kind feelings and the intellect to the we human race.

Most wonderful what was wakened in former research is with IKOSOLID, the occurring " repulsive force " is **to equip with the kind feelings and the intellect to the we human race**. We want to tell you strongly that these features of " super velocity of light , non-consciousness and repulsive force " contribute for the earth and the human race to evolve and to improve.

IKOSOLID: The birth

In IKOSOLID, the structural principle came out of Koei Endo.

In IKOSOLID, the shape was born from Ikuyo Endo.

In IKOSOLID, the idea of outbreak and the use of the repulsive force was created from Masayo Endo.

IKOSORID was born from the Endo family.

The message from Dr. Alexander Egoyan From the email on September 1st in 2011

Dear Koei Endo, Ikuyo Endo,

I am glad to hear from you. Your new *two papers clearly demonstrate what is IKOSOLID.

I recognize that IKOSOLID really is a brand new geometrical figure and you are its inventors.

This figure has two features which distinguish it from other polyhedrons:

- 1, Completeness: it is composed from two symmetrical polyhedrons using rotation. IKOSOLID is a complete figure because it has two elements complementary to each other and is in agreement with the complementarity principle. My theory also is based on this principle.
- 2, Simplicity: to prepare IKOSOLID we need only two rectangular pieces of paper of the same size. I think that IKOSOLID is the simplest complete polyhedron and undoubtedly it will have scientific and philosophical applications.

Another aspect of your theory that I think is very important is the idea of endless circulation.

Here the question is - what is the path of circulation?

IKOSOLID like structures may be found in the human brain and may play a significant role in Memory processes (knowledge crystallization).

Now I am working on my website which I suppose to launch in November. And I will put links to your site and your articles on my site.

Sincerely yours, Alexander Egoyan
