

**The lithium ion battery problem:**

The problem of lithium ion battery's being heated occurred with the continuation. At the PC, it is Sony. At the cell phone, it is Panasonic. The lithium ion battery of the problem of the generation of heat of Boeing 787 is made by GS YUASA. The cause of the problem of lithium ion battery's being heated occurred with the studies and development only of electron. In the only electronic research, it reached a limit. **When the electric current becomes big rapidly, the magnetic flux huge-izes.** In the electronic technology in today, it isn't possible for the magnetic flux to huge-ize to decrease.

**As the exception, IKOSOLID can do magnetic flux decrease.** The magnetic flux reducing effect = The occurrence of repulsive force element e+. Super conductor "IKOSOLID" can handle gravitation element e - and repulsive force element e +.

Patent Magnetic flux decrease element No.4827397

Trademark registration イコソリッド IKOSOLID No.4801773

There are articles and the experiments about the magnetic flux decrease effect in this website and book "IKOSOLID"
